SUMMARY

Software Engineer with 1+ year of experience building backend services, ETL/data pipelines, and production Generative AI (RAG) systems. Skilled in Python, JavaScript, and SQL, with hands-on experience across the Apache Spark/Hive/Hadoop ecosystem, REST API development, and LLM application engineering using LangChain, FAISS, and OpenAI APIs. B.Tech from NIT Srinagar; solved 500+ Data Structures & Algorithms problems on LeetCode. Seeking to bring strong engineering fundamentals and applied AI experience to a backend/data-focused Software Engineer role.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL

Backend & APIs: REST APIs, Node.js, Express.js, OOP

Data Engineering: Apache Spark, Apache Hive, Hadoop, ETL Pipeline Development, Data Transformation & Cleaning

Generative AI: LangChain, FAISS, Retrieval-Augmented Generation (RAG), Vector Embeddings, Semantic Search, Prompt Engineering, OpenAI API

Databases: MongoDB, Query Optimization, Indexing

Tools & Platforms: Git, GitHub, Linux

EXPERIENCE

Data & GenAI Engineer — Nexturn, Bengaluru, India

Sep 2024 – Present

- Designed and built a Retrieval-Augmented Generation (RAG) application using LangChain and FAISS, enabling domain-specific question answering over unstructured documents.
- Engineered the document ingestion pipeline end-to-end – chunking, embedding generation, and vector indexing – to improve retrieval accuracy for multi-turn conversational queries.
- Integrated OpenAI APIs into the retrieval pipeline and iterated on prompt templates through repeated testing to improve answer relevance for domain-specific queries.
- Authored and optimized SQL queries (joins, aggregations, CTEs, window functions) for structured data transformation and business reporting.
- Built and debugged ETL pipelines to ingest, clean, and transform structured datasets using Hadoop, Hive, and Spark.

PROJECTS

RAG-Based Document Question Answering System

LangChain, Sentence Transformers, FAISS, Streamlit, Python

- Built a Retrieval-Augmented Generation application enabling users to ask natural language questions about documents and receive context-aware answers.
- Implemented document processing and chunking with LangChain, generated embeddings with Sentence Transformers, and used FAISS for semantic retrieval; integrated an LLM to generate grounded responses.
- Built an interactive Streamlit interface for document upload and querying.

Web2App – Website to Mobile App Generation Pipeline

Python, Streamlit, Playwright, React Native, Expo, LLM Evaluator

- Built an end-to-end pipeline converting a website URL into a functional React Native (Expo) mobile app by extracting UI structure via Playwright and generating native components through template-based code generation.
- Designed an LLM-based evaluator to score generated app quality and added a human-in-the-loop review layer with SQLite persistence to catch and correct generation errors before deployment.

ServiceNow SecOps – Exploitable Likelihood Score (ELS) Dashboard

ServiceNow, UI Builder, JavaScript

- Built a vulnerability-prioritization tool that computes an Exploitable Likelihood Score (ELS) from CVSS and threat data, and configured a custom ServiceNow table to manage the underlying application data.
- Developed UI Builder pages to visualize ELS scores, vulnerability groupings, and Security Incident (SIR) records for security analysts.

EDUCATION

National Institute of Technology (NIT), Srinagar

B.Tech in Electronics & Communication Engineering | 2021 – 2025

Relevant Coursework: Data Structures & Algorithms, DBMS, Operating Systems, Object-Oriented Programming
